

### Text Prompt (Fixed)

*This is a visual in-context learning task. The first two images are an input and output of Task A. The third image is the input for Task B. The goal is to perform Task B on the third image and generate an output image, learning from Task A.*

#### Task A: Inpainting

#### Task B: Colorization

**Gemini-2.5-Flash**

### Text Prompt (Ours)

#### (1) Input Descriptions

*Task A: The first image shows a crocodile lying on grass ... There are black blocks and lines drawn across the image for masking.*

*Task B: The input image depicts a yacht docked at a marina ... The image is in grayscale.*

#### (2) Visual Changes

*Task A: The output image has the black areas filled, resulting in a full, unobstructed view. Task B: The output image should show vibrant blues for the water and sky, as well as the natural tones of the yacht and surroundings.*

#### (3) Task Differences

*Task A focuses on restoring masked areas to fill in the missing parts. Task B aims to convert a grayscale image back to its original color form, enhancing the visual appeal by reintroducing color details.*

#### Output (Fixed)

$I_B^{out}$

#### Output (Ours)

$I_B^{out}$

#### Ground Truth

$I_B^l$
